

Satellite is one of the best events that has happend since sliced bread. In using the weather and traffic channels on XM, it has helped me manuver in and out of traffice jams in the major cities in the US. This being that I am a professional driver and owner operator of my own equipment. XMas you know broadcasts clear coast to coast, border to border. If having to use the AM or FM radio stations, to many commercials and to much static to get anything of quality. I pay for 3 XM radios and the services. What could other stations offer me load and clear. If these broadcasters have a problem, they should get into

XM Satellite Radio. They would probably be alot more content and happier. We have to many people trying to run lives and everybody elses. Have a nice day. Thank you for your consideration.
